ABOUT US

The exact name of our company is Defenceport Molding and Injection, Defence Industry, Import and Export, Limited Company. Our company continues production for over thirty years with a custom that is passed from father to son. We define ourselves as the address of innovation and quality.

R&D and quality innovations are the priority of our firm. Connected to that we have a strong team for designing, artshop, metal, and plastic injection units. All the plastic injection work is done inside the house. Also, we have a facility and a team for machining. We have a barrel workshop, deep-hole drilling machines, CNC machines that are qualified enough to process revolver parts, and a great team that oversees all these affairs. Other than that we have a pressing workshop for producing metal magazines and a specialized team for the job. We have business partnerships for production and sales in the Defence Industry. When we evaluate these qualities altogether, it is apparent that we are a company which always presents impressive, different, quality jobs. We became one of the few companies that produce 20-round drum magazines just like we became the company that produced the best working and designed 1919 style 12 gauge 20-round drum magazine. After that, we managed to produce the first 1919-style 30-round drum magazine and we are working on a saiga drum project that can take 3" shells. All the products we have and produce in our catalog have unique features and qualities. Our fundamental focuses are endurance, design and innovation.

As a team, we are after projects and project partnerships for the World's most solid, different, and popular products. We surely moving forward in the direction of being the company that sets standards and leads the way.

20 RD DRUM MAGAZINE

DEFENCEPORT is one of the few 20 round drum magazine manufacturers in the world. The fundamental feature that seperates DEFENCEPORT DRM-12 20RD Drum Magazine from others is easy-to-load ability. Maybe we should have named it easy load magazine. It is even way more easier to load than 5 or 10 round magazines.

A principle we take seriously is durability. DEFENCEPORT DRM-12 20 Round Drum Magazine transparent cover, body and included other parts passed drop tests. It s possible to drop your magazine while loading it, thats why we conducted our tests in shooting range. We dropped it both loaded and unloaded onto hard surfaces. The results were out of the charts including for transparent cover. Specially selected raw materials with special alloys provided us this.

Metal part of DEFENCEPORT DRM-12 20 Round rum Magazine is specially hardened to handle the weight of the drum when loaded.

Performance is again one of our main principles. We emptied our drum under 5 seconds for many times and this drum never failed to cycle.

Our drum will take shells that is up to 3". It was manufactured in order to be compatible with all 1919 style shotguns. **The DEFENCEPORT DRM-12 Drum Magazine you are going to buy will work with %95 of the shotgun in the industry.**

All parts are changeable and optimal for service considering spare parts, even the metal magazine part. We can put 2+1, 5+1, 10+1 limiters according to importation laws of the target country. Designs and some working parts are patented.

30 RD DRUM MAGAZINE

DEFENCEPORT

DEFENCEPORT DRM-12 30 Round Drum Magazine is the only product ever manufactured for 1919 style. It is a product that will make a shooter special. Your shotgun and you will feel stronger with DEFENCEPORT DRM-12 30 Round Drum Magazine. Easy loading feature is unique just like our 20 round drum magazine. You will be loading it way easier than you thought.

A principle we take seriously is durability. We upgraded its durability to endure more stress because of the fact that it is way heavier than the 20 round drum magazine. DEFENCEPORT DRM-12 30 Round Drum Magazine transparent cover, body and included other parts passed drop tests. It s possible to drop your magazine while loading it, thats why we conducted our tests in shooting range. We dropped it both loaded and unloaded onto hard surfaces. The results were out of the charts including for transparent cover. Specially selected raw materials with special alloys provided us this.

Metal part of DEFENCEPORT DRM-12 30 Round rum Magazine is specially hardened to handle the weight of the drum when loaded. We used way more stronger alloy comparing with our 20 round drum magazine.

Performance is again one of our main principles. We emptied our drum under 5 seconds for many times and this drum never failed to cycle.

Our drum will take shells that is up to 3". It was manufactured in order to be compatible with all 1919 style shotguns. The DEFENCEPORT DRM-12 Drum Magazine you are going to buy will work with %95 of the shotgun in the industry.

All parts are changeable and optimal for service considering spare parts, even the metal magazine part. We can put 2+1, 5+1, 10+1 limiters according to importation laws of the target country. Designs and some working parts are patented.

AR10 COMPATIBLE ALUMINIUM
LOWER RECEIVER

CORE12

THE MOST SHOOTER-ORIENTED AR SHOTGUN THERE IS IN THE INDUSTRY, "CORE12" FROM DEFENCEPORT, MADE IN TURKEY.

The new Core12 is the apple of Defenceport's eye. We put so much well-worth time and effort into this shotgun just so the shooters like us can train with it and up their shooting game. With this new design, you will not just see the difference, you will hear and feel it while you hold it, load it and shoot it. This is a shotgun you can fully customize and make your go-to shotgun. If you want something that both looks good and works well, the new Defenceport Core12 is your choice. Don't believe us? Just try it! Keep reading for more information.

**Accessories are not included

MILSPEC/BUFFER TUBE

On the buttstock side, we have a buffer tube made according to the military standards(Mil-Spec) that you can apply your favorite buttstock without even considering if it will fit or not.

AR COMPATIBLE PISTOL GRIP ANGLE

The pistol grip and its port are also designed according to the military standards of an AR15 so that you can change the grip according to your needs.

AMBIDEXTROUS CHARGING HANDLE

Our new patented design for the charging handle is lighter and easier to change compared to its rivals. You can use it both on the left and the right.

* Design is patented

AMBIDEXTROUS MAGAZINE RELEASE BUTTON

The magazine release button is also ambidextrous so you can drop your magazine from both sides.

* Design is patented

AMBIDEXTROUS BOLT RELEASE BUTTON

* Design is patented

Defenceport Core12 has a new bolt release button that can be operated from both sides as well in order to prevent the charging handle from striking your hand. We discovered that the right side bolt release button, even though it is a necessity, is appeared not to be on any similar models. We made sure to put right side bolt release button in order to protect shooters from having unwanted injuries while charging their firearms. Other than that, it is necessary yet missing feature in the industry. Ambidextrous bolt release button is a reformist quality for all kinds of shooters. The design is patented.

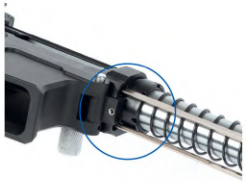
AMBIDEXTROUS SAFETY SWITCH

Just like all of the buttons, the safety switch appears to be on both sides as well to make your job easier. The design is patented.

* Design is patented

CORE12

BARREL NUT LOCKING SYSTEM



One of the main issues we experienced while training with other shotguns is that the barrel nut gets loose and jeopardizes the safety of the shooter. Defenceport also has a patented solution for that problem by inserting a set screw that prevents the barrel nut from getting loose even after hundreds of rounds get shot.

* Design and technology is patented

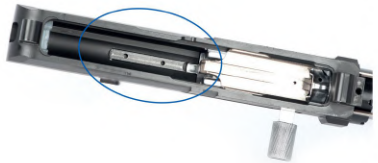
BOLT BUFFER TECHNOLOGY

The upper receiver of Core12 has a bolt-stopper buffer placed into it that prevents striking and any damage that the buffer can cause to the upper receiver and reduces the recoil while shooting.

AR COMPATIBLE TELESTOCK SURFACE

Measurements of the end of the tube where it meets the lower receiver are compatible with all the telestock plates so that you can use accessories such as folding stock accessories, and sling attachments. Our own three telectock plates and all of its metal parts are moduler and compatible with all AR buffer tubes in the market.

BOLT FOLLOWER BLOCK



We placed a special metal block inside of the upper receiver that acts as a follower for the bolt. It ensures the bolts route on a sleek surface. With this addition the bolt runs smoother on a flat surface and the shotgun runs flawlessly.

GAS EJECTING PISTON SYSTEM

The new patented Gas Ejecting Piston System is designed and tested solely by Defenceport technicians and shooters. This system allows you to shoot from low-velocity to high-velocity rounds without manually changing or adjusting the piston. We achieved this by designing a piston system that ejects surplus gas from the high-velocity rounds and cycles the firearms perfectly like the shooter didn't even change the loads.

* Design and technology is patented

CORE12

TACTICAL TRIGGER DESIGN

With its aggressive design, our trigger is made specifically for the comfort of the shooter's fingers. It is smooth and lighter than most with its iconic triangular angles. This trigger design is patented.

* Design is patented

FUNCTIONAL M-LOK CHANNELS

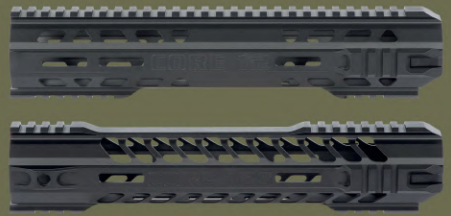
Core12 has different sizes of handguards that are suitable for any shooter. Despite the other shotgun in the market, M-LOK channels on our handguards are all functional due to the appropriate gap between the handguard and the gas piston. Also they are manufactured to their standard measurements, so shooters can apply any accessory they prefer. This feature itself improves the adaptability of the Core12. Apart from that, Defenceport handguards are specially designed to hold our barrel nut lock inside of its port and act as a second solution for the barrel nut to stay tight after countless shots are fired.

SPECIALLY DESIGNED MAGAZINE PORT

Our magazine port is specially designed and tested for you to be able to shoot with any magazine you want in the industry and reduce the need for a mag-well with a special angle carved inside the port. It will eat all the rounds you can find without being picky about your magazine even with your DRM-12 drum mags.

CORE12 DEFENCEPORT

MODULAR HANDGUARDS



Defenceport, with its Core12 model, offers different handguards with different designs and sizes for its shooters. At this stage of our R&D efforts, we have three different handguards, which are Core12, Core12S and Core12L. All of them are covered with different features and details made according to the needs of the users.

M22

Defenceport M22 is a shotgun that has a plastic lower receiver. It is designed as a lower-budget but higher-performance shotgun. The pinned system that holds the lower and the upper receiver together is what makes him different from other AR-type plastic lower receiver shotguns. It leaves any other plastic lower receiver shotgun with its nearly impossible-to-find ambidextrous charging handle, ambidextrous safety switch, and ambidextrous magazine release button. A bolt buffer system enhances the life expectancy of your shotgun and serves as a recoil emission system for shooters. Easy to dismantle lower and upper receivers provides convenient maintenance and make it easy to carry and store.

BOLT BUFFER TECHNOLOGY

TANK12 / D-B12M

They say bullpup designs are the future of the weapons industry, and exactly for that reason, we are here with the DEFENCEPORT Tank12 that will lead the future. With this 12 gauge shotgun, we are offering you a more convenient and enjoyable experience. With new longer front and rear sights aiming from the shoulder is now more comfortable and convenient. Tank12 took advantage of the R&D resources of Defenceport and equipped them with useful features. We followed the principle of durability and added the barrel nut lock, and bolt buffer and increase the lifetime of your bullpup. We added an ambidextrous magazine release button to increase the shooter's speed. Defenceport thought about our left-handed shooters and added an ambidextrous charging handle to the mix. Last but not least we put an ambidextrous safety switch to enrich your experience. DEFENCEPORT Tank12 is compatible with our signature 20 and 30-round DRM-12 Drum Magazines.

TANK12S / D-B12M

We added Tank12S to our family for Defenceport users as a price-performance bullpup. While consisting all of the features of a Tank12, it is lighter and affordable because of its polymer handguard. With DEFENCEPORT Tank12S, we lighten the load of a compact design and made it more tactical and fit for home defense. Because of this, you can cover the corners of your house faster and more easily. The magazine port of Tank12S is proper for the use of our 20 and 30-round DRM-12 Drum Magazine.

DEFENCEPORT MFPA and MSP models are both magazine-fed pump-action shotguns, which are the new generation of pump-action shotguns. They are compatible with 2, 5, and 10-round 1919 style magazines just like they are compatible with DEFENCEPORT 20 and 30-round DRM-12 Drum magazines. Free your pump-action shotgun's magazine capacity with DEFENCEPORT'S MFPA and MSP models.
